WORK EXPERIENCE

Senior Software Engineer - Amagi

Bengaluru | July 2025 - Present

Designed a serverless media ingestion system leveraging S3 event notification and Lambda function to automate asset creation/processing, eliminating manual upload workflow for broadcast payout.

Implemented chaos engineering and resilience testing using LitmusChaos and AWS Fault Injection Simulator (FIS) to simulate failures such as network loss, Kubernetes pod deletions, RDS outages, and PubNub API disruptions, enabling proactive identification of system weaknesses under stress.

Designed and developed backend services for media workflow and broadcast automation platforms using Golang, Python, Ruby on Rails, and AWS.

Built serverless media ingestion workflows utilizing Amazon S3 event notifications and AWS Lambda for automated media asset processing.

Automated chaos engineering and resilience testing workflows with Litmus and Kubernetes, enhancing operational efficiency across distributed systems.

Worked on DAZN Linear playlist processing pipelines, enabling automated ingestion of BFX schedules, playlist generation, metadata enrichment, and downstream payout integration.

Software Developer - KreditBee

Bengaluru | July 2023 - July 2025

Designed and implemented a scalable data pipeline to parse and normalize Freshdesk customer support JSON data into 10-15 relational database tables, enabling analytical queries that identified recurring customer issues and drove product and support improvements.

Designed and implemented the Premium Personal Salaried Loan Intent Submission feature, focusing on accurate data intake, validation workflows, and secure database storage for loan applications ranging from INR 3,00,000 to INR 10,00,000.

Developed WhatsApp and email notification systems using GoLang on AWS Fargate, enhancing error detection and resolution efficiency.

Developed a PDF templating service to streamline the generation of user documents (LFA, Sanction, CSR reports) within the KreditBee App. Consolidated redundant codebase by implementing a service that converts templated Markdown files to PDFs, supporting dynamic template variables. Developed a preview system for generated PDFs.

Developed and implemented a secure and efficient bulk insurance data upload solution, using S3 pre-signed URLs for CSV file handling and seamless database updates.

Developed the admin panel to manage healthcare plans and Freshdesk details, streamlining updates and additions for administrators.

Software Developer Intern - KreditBee

Feb 2023 - July 2023

Developed an InAppFeedback module with a React.js frontend and a Go backend using the Gin framework, Beego ORM, and MySQL to enable efficient feedback submission, storage, and REST API operations.

AWS Cloud Intern - F13 Technologies

May 2022 - July 2022

Worked with AWS services, including EC2, Lambda, S3, IAM, VPC, and CloudWatch, to configure and manage cloud infrastructure during internship.

SKILLS & INTEREST

Programming Languages: Golang, Python, SQL, C++, Ruby

Backend & Architecture: REST APIs, Event-Driven Systems, Distributed Systems

Cloud & DevOps: AWS (S3, Lambda, Fargate, RDS, EC2, IAM), AWS Fault Injection Simulator (FIS)

Databases: MySQL, MongoDB, SQLite

CS Fundamentals: DBMS, Operating Systems, Computer Networks

AI Tools: ChatGPT, GitHub Copilot, Roo Code, Cursor, Claude Code

EDUCATION

INDIAN INSTITUTE OF INFORMATION TECHNOLOGY BHOPAL (IIIT Bhopal), India

Bachelor of Technology, Computer Science and Engineering (CSE)

CGPA: 8.56/10

July 2019 - May 2023

CERTIFICATIONS

AWS Cloud Practitioner (09/2021 - 09/2024)

AWS Certified Solutions Architect (10/2023 - 10/2026)
